

Development and evaluation of antimicrobial packaging film

Filesize: 9.63 MB

Reviews

Certainly, this is the greatest work by any author. It can be written in easy words and phrases rather than confusing. I am just happy to let you know that this is actually the greatest ebook we have studied inside my individual daily life and may be the greatest ebook for at any time.

(Trent Monahan)

DEVELOPMENT AND EVALUATION OF ANTIMICROBIAL PACKAGING FILM

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Addis Ababa university institute of technology post graduate program | A safe and reliable delivery of food has emerged as one of the major industrial concerns of our time. Some 30 percent of food losses in developing countries are the direct result of improper food packaging. Contamination of food products by pathogenic bacteria has emerged as a serious public concern. Bacteria such as *Listeria monocytogenes*, *Bacillus cereus*, *Escherichia coli* (O157:H7), *Staphylococcus aureus*, *Salmonella typhimurium*, and *Shigella sonnei* are identified as the most potent pathogens associated with food borne illnesses. Inherent antibacterial properties and film-forming ability of starch-saponin mix make it ideal for use as an antimicrobial packaging material. The results have clearly shown that a release rate of the saponin from the films can be modified by changing the composition of the initial casting solution. The maximum antimicrobial activities and tensile strength of the films increased with an increase in an amount of the saponin in the casting solution. | Format: Paperback | Language/Sprache: english | 155 gr | 220x150x5 mm | 104 pp.
