

Laser Interaction and Related Plasma Phenomena

By H. Hora

Springer Okt 2012, 2012. Taschenbuch. Book Condition: Neu. 244x156x35 mm. Neuware - The 9th International Workshop on 'Laser Interaction and Related Plasma Phenomena' was held November 6-10, 1989, at the Naval Postgraduate School, Monterey, California. Starting in 1969, this represents a continuation of the longest series of meetings in this field in the United States. It is, in fact, the longest series anywhere with published Proceedings that document the advances and the growth of this dynamic field of physics and technology. Following the discovery of the laser in 1960, the study of processes involved in laser beam interactions with materials opened a basically new dimension of physics. The energy densities and intensities generated are many orders of magnitude beyond those previously observed in laboratories. Simultaneously, the temporal dynamics of this interaction covers a broad range, only recently reaching ultra short times, of the order of a few femtoseconds. Applications of this technology are of interest for many types of material treatments. Further, from the very beginning, a key ambitious goal has been to produce fusion energy by intense laser irradiation of a target containing appropriate fusion fuels. The various phenomena discovered during the ensuing research on...

Reviews

The ebook is easy to go through easier to recognize. We have studied and I am certain that I will plan to read through once again in the future. I am quickly getting a pleasure of studying a composed publication.

-- Prof. Adah Mertz Sr.

Very good eBook and beneficial one. It generally is not going to price a lot of. I discovered this ebook from my dad and he advised this book to learn.

-- Tyrel Bartell
