Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Agricultural Engineering in India: Irrigation Again, the interference of the Government may render the villagers discontented, make them lazy, and take away their self-reliance. They will perhaps abandon drawing water from their wells altogether, and prefer the less laborious occupation of watching canal water flow over their fields. The cattle will deteriorate, since they are no longer required to raise the water. The facilities for production will lead to over-cropping and gradually impoverish the soil. Lands near the canal will become water-logged. The general spring level of the country will be raised by percolation and malarious fevers will increase and lastly, when their wells are abandoned, their cattle gone, and the cultivator become enervated and effeminate, in the midst of an exceptionally dry season, some accident will happen to throw the whole canal out of gear for several years. The answer to all these objections is the same. Your scheme must be designed and carried out intelligently. The cultivator must not be harassed or interfered with unnecessarily. The existing wells must not be interfered with, canal water only introduced into tracts where there are no wells, or only unstable ones. Over-cropping must be discouraged by only permitting a limited supply of water. Percolation must be prevented by clay puddling, and the superfluous water introduced by the canal provided for by suitable drainage schemes. Accident must be guarded against by every human precaution, and by making every member of the establishment responsible for the portion of which he holds charge.
