## Electrochemical Processes in Fuel Cells

By Manfred W. Breiter

Springer. Paperback. Book Condition: New. Paperback. 292 pages. Dimensions: 9.0in. x 6.0in. x 0.7in. The necessity for a better understanding of the basic processes that determine the operation of fuel cells became evident during the development of practical units in the last three decades. The search for efficient electrocatalysts in low-temperature fuel cells intensified the general study of the nature and the role of the electrode material. Research on the complex mechanisms of the anodic oxidation of different fuels and of the reduction of molecular oxygen on solid electrodes was stimulated, and the strong influence of adsorbed species on the electrode reaction in question was investigated. Suitable electrolytes had to be found for the high-temperature fuel cells. The use of electrodes with large internal surface lead to the development of models of porous electrode structures and to the mathematical analysis of the operation of these models under certain conditions. While the chapters I to III introduce the reader to the general field of fuel cells, the progress made in the understanding of the basic problems in the electrochemistry of fuel cells since the end of the second world war is reviewed in chapters IV to XVI of this monograph. In...

### Reviews

*A new electronic book with a new point of view. It was written extremely completely and beneficial. It has been written in an extremely straightforward way in fact it is simply following. I finished reading this publication through which really altered me, alter the way I really believe.*

*-- Dr. Florian Runte*

*This publication is fantastic. It really is full of knowledge and wisdom. You are going to like just how the author writes this publication.*

*-- Harmon Watsica II*
