

Apoptosis of a Nation: Environmental Intoxication and the Prevalence of Hcv-4b Among the Dispossessed of Egypt

By J. Hanna

XLIBRIS. Paperback. Condition: New. 84 pages. Dimensions: 9.0in. x 6.0in. x 0.2in. Egypt, whose soil germinated the first civilization, monotheism, refined ethics, culture of sharing the abundance of extracted natural resources, etc. among its populace became the crucible of organic, moral maladies and the prime exporter of mutated bacterial and viral diseases. The enigma is these mutations are synchronized by several factors, namely; failing medical health, if there is any, abundant filth, cultural bankruptcy, over population, dogmatic militarism, societal deprivation and characterization, etc. These domineering ingredients fossilized Egypt as of 1952 coup in an irrevocable national apoptosis, thus threatening the integrity of other nations by the facile transfer of mutated diseases via frequent and cheap air travel. Therefore, it deemed essential to elaborate on pollution and psychosis-induced organic maladies and grievous crimes evoked by dogmatic cults at the breeding sources, ghettos and sporadic locations of the homeless in major cities and Upper Egyptian villages. The crippled social justice and imbalanced distribution of wealth among Egyptians are expected to accelerate the rate of bacterial and viral evolution thus precipitates de-novo medical risks as mutated species are resistant to known medical managements. Threat of mutated pathogens is two folds: (a) it could labour...

Reviews

Certainly, this is the very best work by any writer. It is loaded with knowledge and wisdom I am just quickly will get a satisfaction of reading through a created publication.

-- Donavon Okuneva

Completely among the best pdf I actually have possibly read through. It is probably the most awesome pdf we have read. You wont really feel monotony at whenever you want of your time (that's what catalogs are for about in the event you ask me).
