

A Reformulation-Linearization Technique for Solving Discrete and Continuous Nonconvex Problems (Paperback)

Filesize: 3.17 MB

Reviews

Most of these ebook is the ideal publication available. It really is rally fascinating throgh looking at period. I am just easily could possibly get a enjoyment of reading through a created pdf.

(Dr. Lilly Nolan)

A REFORMULATION-LINEARIZATION TECHNIQUE FOR SOLVING DISCRETE AND CONTINUOUS NONCONVEX PROBLEMS (PAPERBACK)

To get **A Reformulation-Linearization Technique for Solving Discrete and Continuous Nonconvex Problems (Paperback)** PDF, remember to access the hyperlink under and download the file or get access to other information that are have conjunction with **A REFORMULATION-LINEARIZATION TECHNIQUE FOR SOLVING DISCRETE AND CONTINUOUS NONCONVEX PROBLEMS (PAPERBACK)** book.

Springer-Verlag New York Inc., United States, 2010. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.This book deals with the theory and applications of the Reformulation- Linearization/Convexification Technique (RL T) for solving nonconvex optimization problems. A unified treatment of discrete and continuous nonconvex programming problems is presented using this approach. In essence, the bridge between these two types of nonconvexities is made via a polynomial representation of discrete constraints. For example, the binariness on a 0-1 variable x_j can be equivalently expressed as the polynomial constraint $x_j(1-x_j) = 0$. The motivation for this book is the role of tight linear/convex programming representations or relaxations in solving such discrete and continuous nonconvex programming problems. The principal thrust is to commence with a model that affords a useful representation and structure, and then to further strengthen this representation through automatic reformulation and constraint generation techniques. As mentioned above, the focal point of this book is the development and application of RL T for use as an automatic reformulation procedure, and also, to generate strong valid inequalities. The RLT operates in two phases. In the Reformulation Phase, certain types of additional implied polynomial constraints, that include the aforementioned constraints in the case of binary variables, are appended to the problem. The resulting problem is subsequently linearized, except that certain convex constraints are sometimes retained in particular special cases, in the Linearization/Convexification Phase. This is done via the definition of suitable new variables to replace each distinct variable-product term. The higher dimensional representation yields a linear (or convex) programming relaxation. Softcover reprint of the original 1st ed. 1999.
