Condition: New. Publisher/Verlag: Morgan Kaufmann | **Managing Trade-Offs in Adaptable Software Architectures** explores the latest research on adapting large complex systems to changing requirements. To be able to adapt a system, engineers must evaluate different quality attributes, including trade-offs to balance functional and quality requirements to maintain a well-functioning system throughout the lifetime of the system. This comprehensive resource brings together research focusing on how to manage trade-offs and architect adaptive systems in different business contexts. It presents state-of-the-art techniques, methodologies, tools, best practices, and guidelines for developing adaptive systems, and offers guidance for future software engineering research and practice. Each contributed chapter considers the practical application of the topic through case studies, experiments, empirical validation, or systematic comparisons with other approaches already in practice. Topics of interest include, but are not limited to, how to architect a system for adaptability, software architecture for self-adaptive systems, understanding and balancing the trade-offs involved, architectural patterns for self-adaptive systems, how quality attributes are exhibited by the architecture of the system, how to connect the quality of a software architecture to system architecture or other system considerations, and more. Explains software architectural processes and metrics supporting highly adaptive and complex engineering. Covers validation, verification, security, and quality assurance in system design. Discusses domain-specific software engineering issues for cloud-based, mobile, context-sensitive, cyber-physical, ultra-large-scale/internet-scale systems, mash-up, and autonomic systems. Includes practical case studies of complex, adaptive, and context-critical systems | Chapter 1: Managing Trade-Offs in Adaptable Software Architectures Part I: Concepts and Models for Self-Adaptive Software Architectures Chapter 2: Architecting Software Systems for Runtime Self-Adaptation: Concepts, Models, and Challenges Chapter 3: A Classification Framework of Uncertainty in Architecture-Based Self-Adaptive Systems With Multiple Quality Requirements Chapter 4: An Architecture Viewpoint for Modeling Dynamically Configurable Software Systems Chapter 5: Adaptive Security for Software Systems Part II: Analyzing and Evaluating Trade-Offs in Self-Adaptive Software Architectures Chapter 6: Automated Inference Techniques to...
