

The Scottish Geographical Magazine, 1914, Vol. 30: Published by the Royal Scottish Geographical Society (Classic Reprint) (Paperback)

By Marion I Newbigin

Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Scottish Geographical Magazine, 1914, Vol. 30: Published by the Royal Scottish Geographical Society Elements which favour a tecionie-topographie Study - There are certain elements, climatic and geographic, which favour such a study as is here outlined. The rocks of the islands are of recent age (miocene and Oligocene), and except where locally disturbed by the displacements, they lie in nearly horizontal positions. The series is characterised by numerous fossils useful for identification, and the petrographic, textural and faunal difierences are such that any one who has acquired familiarity with them may fix not only the formation at any point, but the particular horizon which is exposed. The higher rock surfaces are bare and devoid of vegetation (fig. And the layer of soil within the hollows is upon the average only about eight inches in thickness. The rainfall is from 20-22 inches, and no permanent lakes or streams exist anywhere. As already stated, the relief is rather strong, and the rugged rocky outlines of the islands offer numerous sections of the formations, as do the steep walls of the narrow u...
