It develops a new foundation, at both a popular, and a technical level, for current fundamental theories of elementary particles, the Standard Model and SuperString Theory. Both of these theories can be placed on a quantum computer language foundation. The idea: elementary particles such as electrons, quarks and so on can be viewed as the letters or symbols of a cosmic alphabet, or cosmic code, in a computer grammar (language). A new view of reality emerges from this perspective: the universe is one tremendous word. This new theoretical basis is consistent with all known physical experiments and theory. **Cosmos and Consciousness** explores this challenging idea showing how fundamental physics theories can be based on quantum computer languages, and incidentally developing many new features of Quantum Computers. A Quantum Computer is a type of computer that is based on quantum mechanics. The obvious analogy of the universe as a word to religious and philosophical concepts such as the Word leads to a comparison of this view with parallel ideas in these disciplines. It brings Science to a startling similarity with the religious concept of the Word - a concept that is not only Christian but is also prominent in Judaism, and was prominent even earlier in the Ancient Egyptian religion 5000 years ago. With the universe reduced to a word - structured by the laws of physics - and matter reduced to symbols the book shows the insubstantiality of the universe in its most fundamental parts. Human Consciousness is similarly insubstantial. So **Cosmos and Consciousness** then analyzes human Consciousness and shows it...
