In all the preceding experiments on rectangular bars, the defect of elasticity, measured by the deflexion remaining in the bar after the load had been removed, was observed, for reasons previously given (arts. 86, 92); and to show the law which regulates this defect, its value, with equal additions of weight, will be collected from the mean results upon each iron, and placed under the corresponding weights in the following Table. above. DEFECT OF ELASTICITY. 100. Defect of elasticity, or set, as obtained from the mean deflexion of bars cast from models 1 inch square, laid on supports 45 ft. asunder; using only those irons upon which experiments had been made, as to the set, upon all the weights set down. 101. Comparing the mean sets, or defects of elasticity, in each series of the preceding Table, with the computed ones, it appears that the defects vary nearly as the square of the weights; the set being the abscissa and the weight...
