Reviews

Completely one of the best ebook I actually have possibly study. It can be writter in simple phrases and not confusing. You can expect to like the way the author write this book.

However, progress has been slow in satisfying a pressing need for general purpose pattern matching algorithms that are efficient in both time and space. We offer asymptotic improvements in both time and space to Chase s bottom-up algorithm for pattern preprocessing. A preliminary implementation of our algorithm runs ten times faster than Chase s implementation on the hardest problem instances. Our preprocessing algorithm has the advantage of being online with respect to pattern additions and deletions. It also adapts to favorable input instances, and on Hoffmann and O Donnell s class of Simple Patterns, it performs better than their special purpose algorithm tailored to this class. We show how to modify our algorithm using a new decomposition method to obtain a space/time tradeoff. Finally, we trade a log factor in time for a linear space bottom-up pattern matching algorithm that handles a wide subclass of Hoffmann and O Donnell s Simple Patterns. I. Introduction Pattern Matching in trees is fundamental to term rewriting systems [21], transformational programming systems [4, 15, 26, 30, 35], program editing and development systems [10,23, 32], code generator generators [14, 17, 19, 29], theorem provers [24], logic programming optimizers that attempt to replace unification and matching [27], and compilers for functional languages such as ML [34], and Haskell [22] that have equational function definitions.
